Hi everyone, welcome to iitmind.com in this post i have the "GRB PHYSICS FOR COMPETITIVE ENGINEERING EXAMS by G.C AGRAWAL". iitmind.com This book "Physics for Competitions" is an attempt in this direction and meant for students preparing for various entrance examinations like IIT, MNR, CPMT, CSSE, EAMCET etc. • In this book graphical analysis along with integral and differential calculus is used freely, as in the opinion of author physics cannot be dealt properly without their use. • SI units are adopted throughout the book. However along with SI units other systems of units or practical units have also been frequently used in the book as the author finds it more convenient to use them. • Subject matter(theory) is logically and thoroughly developed and discussed along with derivations and proofs so that students may understand the basic concept properly . • To make the subject matter up-to-date and advanced, a large number of central notes and foot notes have been incorporated where necessary. These contain either higher and lower level subject matter in brief or extension and alteration possible in a given question or problem . • Here and there new techniques which are short and sharp have been used to solve the existing problems. Also whenever and wherever possible many alternative solutions to the same problem are provided to make the subject well understood. • Large number of carefully and critically selected questions and problems from different competition papers and books with proper solutions, answers or hints are arranged systematically so that students may develop the aptitude of attacking and attempting new questions himself by applying the basic principles of physics logically. • The author shall feel amply rewarded if the book is able to quench the thirst of the discerning readers in some measure. It shall also be highly appreciated if readers either point out misprint or suggest precise alternative solutions to any of the problems and questions given in the book. 1. Unit & dimension 2.
